Research Promotion Policy

1. Preamble

B.S. Abdur Rahman Crescent Institute of Science and Technology has a well-established research promotion policy to build a research ecosystem and create a conducive research ambiance for promoting and expediting research activities among faculty members, research scholars, postgraduate and undergraduate students.

2. Research administrative structure

The Institute has a Research Advisory committee and Research Board to monitor all kinds of research activities and facilitate high-quality research publications. The Research Board formulates and updates research policies time to time according to UGC Regulations and to ensure that researchers follow the research guidelines and regulations of our Institute.

Code of Ethics

1.1 CODE OF ETHICS to check malpractices and Plagiarism in research

1.1.1 Preamble

The purpose of this set of guidelines is to provide a positively oriented set of practical suggestions for maintaining integrity in research. Observance of these guidelines will help an investigator avoid departures from accepted ethical research practice and prevent those most serious deviations that constitute research misconduct. Research misconduct is defined as fabrication, falsification, or plagiarism including misrepresentation of credentials in proposing, performing, or reviewing research or in reporting research results.

1.1.2 Plagiarism

Authors who present the words, data, or ideas of others with the implication that they own the same, without attribution in a form appropriate for the medium of presentation, are committing theft of intellectual property and may be guilty of plagiarism and thus of research misconduct. This statement applies to reviews and to methodological and background/historical sections of research papers as well as to original research results or interpretations. If there is a word-for-word copying beyond a short phrase or six or seven words of someone else's text, that section should be enclosed in quotation marks or indented and referenced, at the location in the manuscript of the copied material, to the original source. The same rules apply to grant applications and proposals, to clinical research protocols, and to student papers submitted for academic credit. Not only does plagiarism violate the standard code of conduct governing all researchers, but in many cases it could constitute an infraction of the law by infringing on a copyright held by the original author or publisher.

The work of others should be cited or credited, whether published or unpublished and whether it had been written work, an oral presentation, or material on a website. Each journal or publisher may specify the particular form of appropriate citation. One need not provide citations, however, in the case of well-established concepts that may be found in common textbooks or in the case of phrases which describe a commonly-used methodology. Special rules have been developed for citing electronic information.
